

DA28 DOES NOT INTERCHANGE WITH DA48

PRODUCT: DA28 // DA48

Recently, there has been some confusion over the interchangeability between the DA28 and the DA48. These two converters are similar in that the pilots, the hubs, the bolt patterns, the overall diameters and the spline counts are identical. However, these converters cannot be interchanged due to significant differences in overall converter heights.

DA28

AVG. OVERALL HEIGHT: 4.045"

The DA28 has a very high stall fin angle on the primary. It has round pads.

DA48

AVG. OVERALL HEIGHT: 4.240"

The DA48 has a medium-high stall fin angle. It has round pads on rectangular lugs.
