

**A3HD**

**PRODUCT INFORMATION**

This converter is now available as an upgrade to the A3. This new unit addresses two problem areas of the OEM torque converter, the turbine and the stator. The turbine in this new unit has a custom reinforcing plate welded in place, while the stator has a new aluminum cap that also serves as an adapter for a new HD bearing. These upgrades do not change stall speed or torque multiplication characteristics, they are only in place to extend the service life of the converter.

Stock / OE stator with phenolic cap

Upgraded stator w/ aluminum cap & bearing

Stock / OE turbine assembly

Upgraded turbine w/ reinforcing plate welded in place
